

EPIC

New sizes 30 and 40
Now featuring up to 4000 cfm,
10 tons of pure power!

Totally

The 35FH Series are full commercial grade remote ducted fan coils featuring a draw through design for optimum energy and acoustical performance. These new unit sizes 30 and 40 with higher airflow, bring us firmly into the traditional belt drive blower coil territory.

- 400 – 4000 CFM (189 – 1888 l/s)
- Up to 6 rows cooling and 2 rows of heating
- Capability up to 1" w.g. (249 Pa)
- MERV 13 filter available
- EPIC Fan Technology®
- Draw through coil design

The new larger sizes both feature dual motor/blower direct drive ECM's as standard. The ultra-energy efficient ECM's are variable volume in operation and feature Nailor's unique EPIC Fan Technology® (Electronic Pressure Independent Control) which provides high turn down ratios to accurately match room load for optimum comfort with no decrease in energy efficiency.

The 35FH Series is available with an Outside Air Inlet option for DOAS applications and Nailor EZstat BACnet ready digital controls.

Ideally suitable for many applications including hi-rise office buildings, hotels, schools and hospitals.
